

TSENT 

Get the feeling. Get results.

THE SENTIMENT ANALYSIS

The aim of a Sentiment Analysis is to get people's perceptions. TSENTO can measure the polarity of the answers (positive, negative or neutral) to one or more questions, starting from a written text.

This analysis is based on intelligent algorithms that are able to elaborate the natural language and analyze texts and computational linguistics.

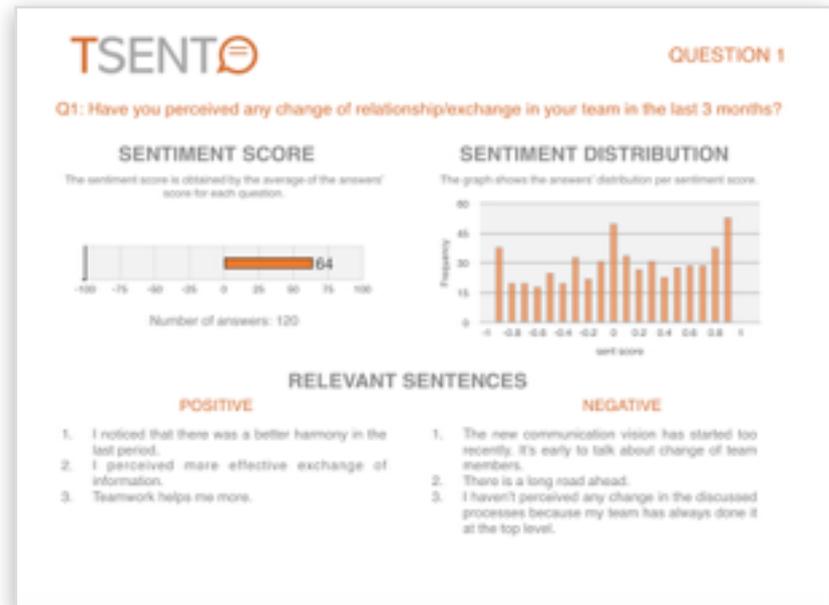

All these techniques can also summarize great about of comments and make them fast and easy to understand.

THE REPORT

There is a report for each question that shows all the information related to the answers' sentiment.

In a single page you can find: the **sentiment score**, obtained by the average of all the answers' scores (it can go from -100 to +100); the **sentiment distribution** graph, to check the homogeneity of the answers; **positive and negative sentences**, chosen by the algorithm as the most relevant.

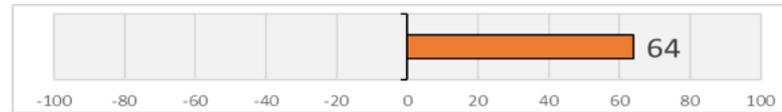

In case of two or more questions, there is an executive summary that shows the **total sentiment score**, compared with the questions' ones, in order to give an overview of the situation.

Single question Sample Report

TOTAL SENTIMENT SCORE

The total sentiment score is obtained by the average of all the questions' sentiment scores.

QUESTIONS

The analysis is based on the following questions.

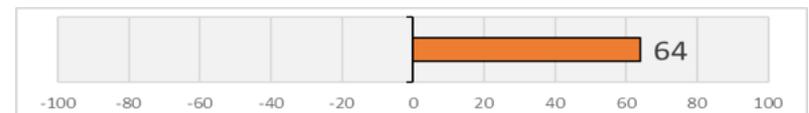

Q1: Have you perceived any change of relationship/exchange in your team in the last 3 months?

Q2: Have you perceived increased performance in your team in the last 3 months?

Q3: Have you perceived improved collaboration system in your team in the last 3 months?

SENTIMENT SCORE

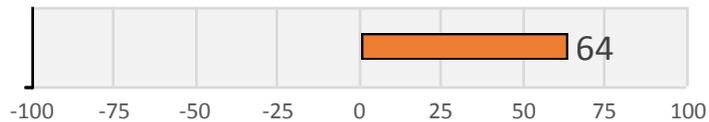

The sentiment score is obtained by the average of the answers' score for each question.

Q1: Have you perceived any change of relationship/exchange in your team in the last 3 months?

SENTIMENT SCORE

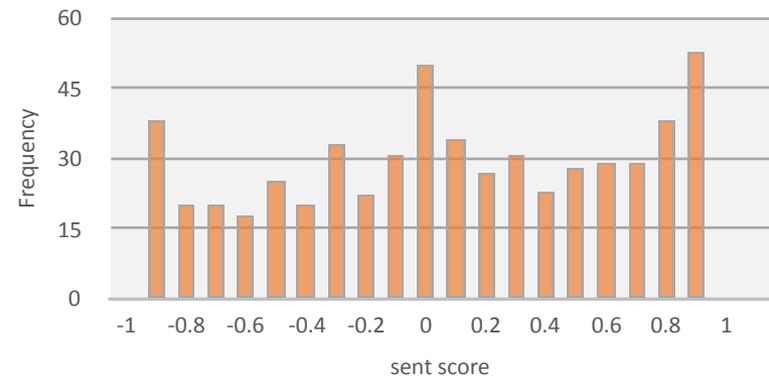

The sentiment score is obtained by the average of the answers' score for each question.

Number of answers: 120

SENTIMENT DISTRIBUTION

The graph shows the answers' distribution per sentiment score.

RELEVANT SENTENCES

POSITIVE

1. I noticed that there was a better harmony in the last period.
2. I perceived more effective exchange of information.
3. Teamwork helps me more.

NEGATIVE

1. The new communication vision has started too recently. It's early to talk about change of team members.
2. There is a long road ahead.
3. I haven't perceived any change in the discussed processes because my team has always done it at the top level.
